

Scan Conversion for Presentations

Ideal for PowerPoint and Keynote

Connect your Mac or PC to the BrightEye Mitto through the VGA, DVI or HDMI port on your computer. Mitto outputs composite, SD or HD video that can be fed into a monitor or production switcher.

Presentations Made Beautiful

Show the full PowerPoint™ on the screen to the group and still keep the presenter's display on your computer for complete control. Use BrightEye Mitto to select the PowerPoint window on your computer.

BrightEye Mitto converts the selected area on your computer to SD or HD SDI video for input to a monitor, projector, router or video production switcher.

A superior quality scan converter, BrightEye Mitto uses new, proprietary scaling technology and exclusive multi-tap filtering to ensure the video output looks superior. The filters automatically adjust in accordance with the conversion being performed.

BrightEye PC and BrightEye Mac software let you simply use your mouse to click and drag over the specific portion of computer video that you want to output. The beauty of this user interface is that you can see which parts of the screen you don't want to output, as well as the parts you do want to use.

The BrightEye Mitto™ family of high performance scan converters are used for the most demanding applications including high-end military, medical, classroom, broadcast, church and corporate. Convert YouTube™, Skype™ video, weather radar, viewer emails and maps to video. Ensemble uses the latest technology in its proprietary upconversion and filtering and that means you have the best looking video.
